I do not support the FCC and its push for digital television (HDTV) inthe United States. I am completely satisfied with the current analog NTSC TV quality. If HDTV is to be an additional service - then that's fine, but do not permit, or force stations to abandon the millions of TV sets so that TV set manufacturers can sell millions of new TV sets. I realize that things are very far along at this stage, but I don't want to throw my TV in the trash in 2006. HDTV should be an auxiliary service, and do not shutdown the current NTSC TV signals. I am sad that the FCC has "sold" the airwaves for the TV channels to businesses. The airwaves used to belong to everyone, and broadcasters had to provide a public service to be able to use the airwave, and the FCC provided the regulation. It is truly sad that special interests override the general public in the usage of the airwaves. I have a suggestion - maintain analog NTSC TV "forever" on VHF channels 2-13 and delegate UHF 14-50 for HDTV use. This way, consumers can continue to use their TV's on the old VHF stations until the demand disappears, if ever.

In summary, we do not want HDTV, and regret being forced by the FCC to have to buy new TV equipment, when a grandfather TV system already exists. We are happy with analog NTSC TV. Do not force us to throw away our TV sets, but allow analog broadcasting on VHF channels 2-13 indefinitely.
